Hi Steve -

Here's the eap file for version 2.4.5 of the eDCI static model. I've also included documentation I generate from the export of the EA file. Maybe they'll be of use.

I just heard from the owner of the BRIDG project that they were shifting the url; that's probably why you couldn't get to it. I'll update the site -- it's out of date, and let you know the new address.

- Don

Hi Don,

Thanks for all the work with the XML schemas and style sheets.

About the EA files -- we're designing the software to pull metadata out of the caDSR, and we want to make our internal mapping document as accurate as possible. So I'd like to be sure I have the most recent model in EA.

I tried the website that I bookmarked as eDCI home page, <http://www.bridgproject.org/edci/>, but it doesn't work. Do you have the files posted elsewhere; if not, would you please send me the latest version of the model in .eap format just to be sure?

Thanks,

Steve Alred
